4	Disabled-friendly, barrier free environment	Divyangjan Friendly Environment

LED LIGHTS

Generator

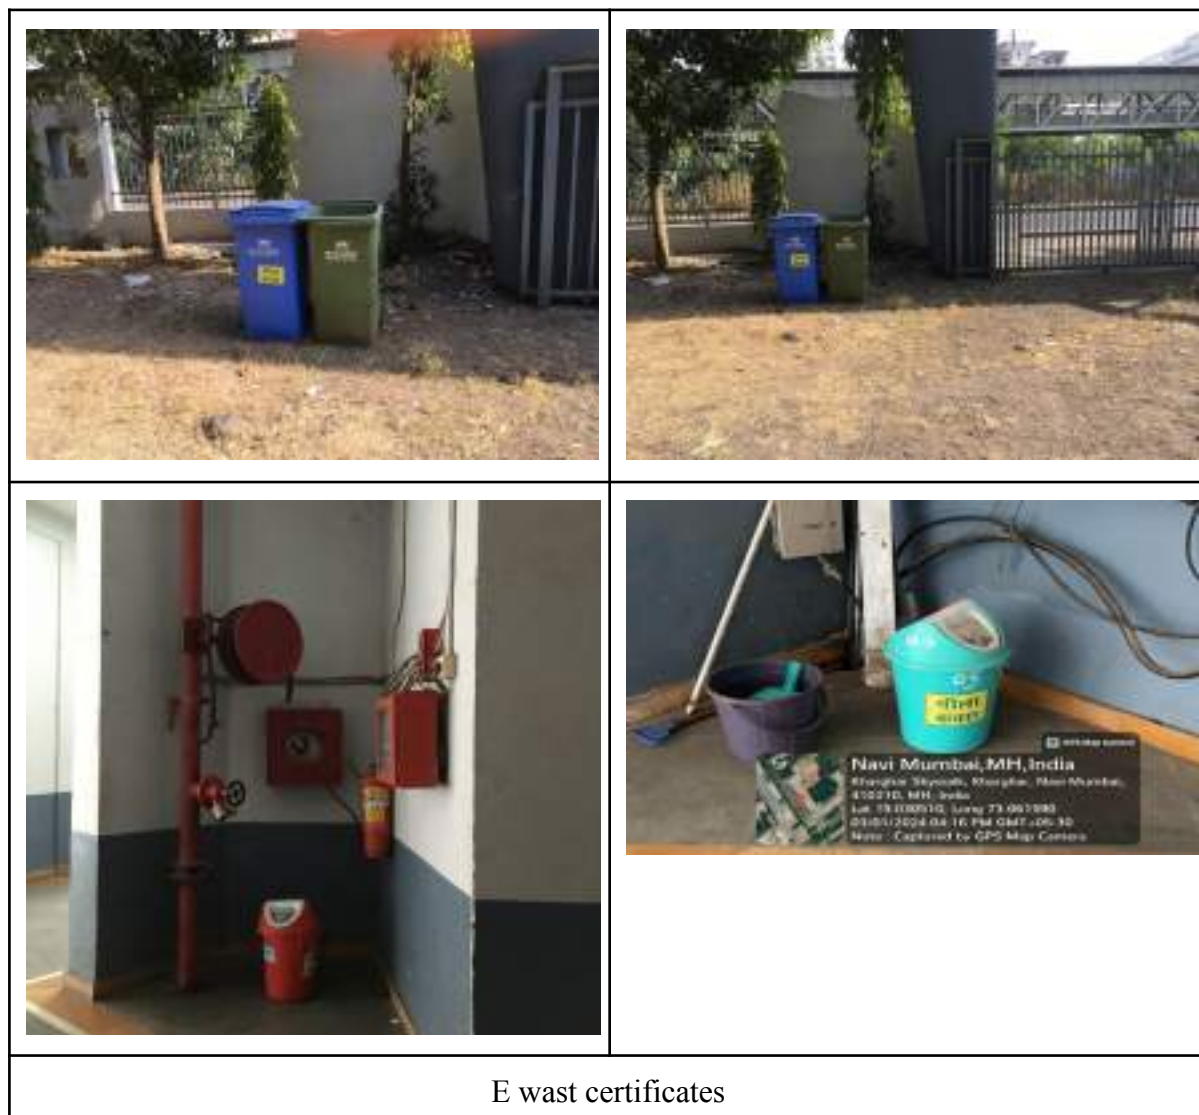

Management of the various types of degradable and nondegradable waste

Solid waste management - All the garbage generated in the campus is segregated into dry and wet garbage according to the norms of the local body responsible for the disposal of solid waste. The garbage is collected on a daily basis.

Liquid waste management - The liquid waste generated is transferred to the underground drainage system through the drainage pipelines. The chemistry laboratory follows proper liquid waste management procedures by segregating organic and inorganic waste. The concentrated acidic or alkaline solutions are neutralised before they are disposed of.

E - waste management - all the E waste generated is collected at one point for storage until it is sold off by the scrap disposal committee to the local scrap dealer so that all the e waste is properly recycled.
